 Ressources naturelles Canada.

This map is not to be used for defining boundaries. It is mainly an index to First Nation Lands and National Parks as defined in the Canada Lands Survey Act, R.S.C., 1985, c. L-6. The Canada Land Survey System (CLSS) provides the foundation to establish property rights on Canada Lands, by defining, describing and documenting the extent of all land interests. The CLSS also manages other lands that are not defined as Canada Lands within the meaning of the act. Administrative decisions should be based on legal documents and legal survey plans. The underlying basemap is presented as background information only.
